It gives me great pleasure to place on record the very good qualities of head and heart of my former colleague , Dr Mohammad Ashraf Shah, a senior Associate Professor at National Institute of Technology , Srinagar Kashmir.

Dr Shah joined the erstwhile Regional Engineering College Srinagar (later upgraded as National Institute of Technology) as a faculty member in 1999. He was a young , dynamic and a promising teacher and research worker which , I am happy to acknowledge now , proved more than what we had anticipated.

Dr shah has an excellent academic and scientific research record and possesses a taste and enthusiasm for science education . He has completed Sponsored Research Projects leading to setting up of Research and Development laboratory facilities in Nanotechnology at N.I.T. Srinagar .He has a large number of high quality research publications in some reputed journals which have been appreciated well. He has authored and edited books both in traditional as well as modern areas of Physics including Nanotechnology , Materials Science and Technology. He has an academic exposure and interaction with large number of academic and research institutions of the country and abroad and is a member of number of professional bodies/societies.

He has already made his name in educational circles of the state particularly for popularizing science and inculcating scientific spirit among aspiring young students through a series of Programs of " INSPIRE" , a Govt. of India initiative of national importance.

Dr Shah has also high organizational skills in arranging number of scientific seminars , workshops and conference events with wide participation of people.

With his pleasing personality, likeable disposition and a compatible friendly attitude towards his colleagues, he is loaded with lot of energy and enthusiasm which, I am very sure will enable him to give a very good account of himself in his life and career.

I wish him success at every stage.

Am Wani 19/4/2020
